May 2016 – Jun 2016 | Scordia, CT - Italy

- Software engineering;
- Team Working;
- Front-end developer : HTML5, CSS, AngularJS;
- Back-end developer: PHP, Ruby on Rails;

MAIN PERSONAL PROJECTS

[OPEN SOURCE] IP NEIGH FOR ANDROID | OWNER & FULL STACK DEVELOPER

This application is developed utilizing both Android SDK and NDK frameworks. Its primary function is to provide an alternative solution to a known issue in Android apps targeting SDK 30, which **restricts the use of iproute2's netlink bind functionality to retrieve the ARP table**. The source code for this app is publicly accessible on GitHub. Link: [Github link](#)

WIFI WPS WPA TESTER | OWNER & FULL STACK DEVELOPER

App developed with Android SDK/NDK. It has with more than **160MLN downloads Worldwide**. App has the goal to show to the user the Security flaws of user own AP and can test the WPS PIN protocol thru PIN calculation (based on AP MAC and/or AP Serial Number) thanks to the reverse engineering of firmwares in the Access Points. Link: <https://play.google.com/store/apps/details?id=com.testers.wpswpa-tester> I also developed an C# version with DotNet to make it compatible with Windows OS. Link: <https://www.microsoft.com/en-us/p/wps-wpa-tester/9nncn4q66sq>
